

# Teranet Home Value Range

Home Value Range provides real time valuation ranges on Canadian residential properties. It enables Real Estate professionals, brokerages and franchises to generate qualified leads, enhance digital strategies and improve customer acquisition strategies.

Via your online real estate application or company's website, the tool provides property owners with insight into the current market value of their home; and prospective home-buyers with key insights regarding property of interest & neighbourhood values.

**AVM**  
POWERED BY TERANET

### Home Value Range

is a lead generation tool that entices prospective home sellers to contact a local Real Estate professional once they have sourced a home value estimation that suggests an attractive gain on the sale of their property.

Teranet's Home Value Range solution leverages our Automated Valuation Model (AVM). The Teranet AVM produces current market estimates for residential properties across Canada using advanced mathematical modeling and Teranet's national property information database.
